Playing forest ranger at a time when mannae mean lives in the role of Jacqueline Logan, as Jerry Malone in the Paramount picture, "Flaming Barrons," a George Melford production which will be shown at the Torrance theatre on Tuesday and Wednesday, May 27-28. Miss Logan, featured with Antonio Moreno and Walter Hiers, has just passed her final flying test and is licensed to take up a machine alone—and well so, too, for at a forest fire which threatens hundreds of lives the ranger, going to town for help, is knocked senseless by the propeller of his plane and Miss Logan continues the journey herself. Not only this, but she drives back to the scene the Malone fire truck, saving the day and winning recognition for the truck, her father's latest invention, of which he expects great things.

Now with a depth of thirty-five feet was encountered by the group of actors while filming "Where the North Begins" out in the wild desolate Furnas county region, in northern California. The actors used snowshoes in all their activities, while snowdrifts sometimes made work impossible. A special lubricant had to

be used by cameraman Frank Good to prevent the buckling of the camera. "Where the North Begins," with a strong cast of players, will be shown at the Torrance theatre Thursday and Friday of this week. It is a Warner Brothers classic of the screen directed by Chester M. Franklin.

"IN THE GREASE"

Notes Gleaned While the Oil Editor Bumps Around Proven Territory

E. J. Milby has spudded in the seventh well on his Douglas lease.

Del Amo No. 11 of the Chamador-Candfield will be in production this week. Unquestionably it will be the first big producer on this lease. It is located just north of the Fullerton Oil company's Cotton-See No. 1, which is making 800 barrels a day, and just west of Torrance No. 14, brought in Sunday for a yield of 2000 barrels.

Ten-inch casing was landed Sunday on Standard's Western No. 1, southern drilling outpost of the 50th. The casing was cemented at 1520 feet.

The Shell company is about ready to begin in the first well on the Blumfield lease north of the Redondo road on the eastern extension.

A core taken from the Shell company's Drifters No. 1, east of Harbor boulevard, between 1475 and 1485 feet, brought up brown shale.

Shell has rigged 4 1/2 casing out of the cement at Ketter No. 2, deep test well, and apparently will attempt to land 4 1/2-inch casing at a lower level. Four cement jobs were unsuccessful at 2000 feet.

The Standard Oil company has located two new wells, No. 7 on the Sentinel-Douglas lease and Marble No. 17, second line well on the Marble sea property.

Marble No. 14 of the Standard Oil company will be in production this week. It is an offset to the No. 1 and the Santa Fe's Torrance No. 14, both of which are in production, making 24 gravity oil.

The Superior Oil company is clearing out Torrance No. 11 in the Torrance industrial tract near the glass factory.

A well-to-do colored man suffered a serious illness, and showed no signs of improvement under treatment by a physician of his own race. So, presently, he dismissed the doctor and summoned a white man. The new physician made a careful examination of the patient, and then asked: "Did that other doctor take your temperature?"

The sick man shook his head doubtfully. "I dunno, sah," he declared, "I sartainly dunno. All I've missed so far is my watch."
